Client: IOR for Gazprom  
Value: confidential  
Completed: May 2015  
Role: Architectural design services

Installation views

## timber & glazed bespoke pergola

We were appointed by IOR Design and Build, to provide architectural design services for an innovative off-site fabricated meeting space to be installed on the 9th floor terrace of Gazprom offices in Euston.

The creation of an informal meeting area between the existing offices of the Managing Director and CEO of Gazprom making use of the existing terrace space. The brief was to provide an enclosure to protect occupants from the elements, including high winds, whilst retaining the sense of being outside. The glazed walls and roof are supported by an outer timber pergola structure, and incorporate glazed sliding doors so that the room can be opened up in summer.

The room was fabricated off site, and had to be manufactured to allow it to be craned into position on the 9th floor to within 2" tolerance either side of the existing facade.

The installation was completed in May, on time and on budget.
